

Dishwashers: Check yours!

A potential safety risk has been identified in the regular use of three models of dishwasher. They were manufactured by Bosch, Balay and Siemens between 1999 and 2005.

Because you can never be safe enough, check your dishwasher:

- Check the make and model number and the batch and serial numbers (written inside the door);
- Go to the site www.dishcareaction.com then choose your country and, using these details, confirm if your machine is listed. If your machine is listed, follow the manufacturer's recommendations;
- If you need to use your machine, use it when you can watch it and never overnight.

For more information visit the Bosch website: www.repairaction.co.uk/bosch
